

Emergency Triage Guidelines

Fictional hospital guidance

Priority 1: immediate assessment for apparent life-threatening instability.

Priority 2: very urgent assessment when serious deterioration is possible.

Priority 3: urgent assessment for clinically stable patients needing timely evaluation.

Priority 4: less urgent presentations may follow higher-priority cases.

Priority 5: routine presentations may be managed when resources are available.

Triage is assigned by trained clinical personnel using the current presentation.

Patients should be reassessed if their condition changes.
